REPORT OF THE ICT BETWEEN ECS EDC DAAC and ASTER GDS
ASTER DAR Tool Enhancements
(ICT 12.1)

5B.04 SUN, 5B.03_JDT.01, DPS.01. Both TS1 and OPS modes were used
during this test. The test was successful even though seven Trouble Tickets
were written. The Trouble Tickets written were deemed more as enhancements
to the JDT rather than failures of the system. The problems encountered did not
stop the functionality of the tool and the trouble tickets identify areas where a
user may become discouraged in the use of the tool. Queries were done on
DARs that were previously submitted to Japan since the systems is operational
and DARs were not submitted.

The problems encountered and the slowness of the system had a great impact
during testing. The system crashed several times while executing basic
commands, (e.g. creating a folder and zooming the map) and a significant
amount of time was involved in waiting for the system to recover. The tool
disappeared several times during the test. All four requirements for this test were
verified despite the limitations mentioned. Seven trouble tickets were submitted
to EDC DAAC, but none were deemed to be of severity 1 or 2.

See Attachment 2 for Trouble Tickets generated during this test.

5.0 Test Results
The results of the test are as follows:

In TS1 mode the following features were verified:
- Submitted DARs using various options, e.g. Spatial, Temporal, Coverage,
  Geometry and Priority
- A new DAR was created copying the results of a xAR search.

In the Operational mode the following features were verified:
- Connectivity to the ASTER GDS database.
- Spatial searches for previously submitted DARs using various options,
  e.g. Spatial, Temporal, Coverage, Geometry and Priority
- Verified status of previously submitted DARs.
- Results of the xAR searches were viewed graphically and textually using
  the AOI and AOS viewer. Acquired Scenes were also displayed, and
  results were consistent when viewed textually and graphically.
- Searches and search results were deleted successfully from the ASTER
  DAR Tool organizer, and the correct messages were displayed when both
  were deleted.

6.0 Test Recommendations
The following are recommendations based on the results of the testing
performed:
- Retest when future patches are installed.

Requirements
The following identifies the status of all requirements associated with this interface at the completion of this test.

<table>
<thead>
<tr>
<th>Requirement ID</th>
<th>Description</th>
<th>Status</th>
<th>Date Tested</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASTER-0110</td>
<td>ECS shall have the capability to send and ASTER GDS shall have the capability to receive DARs for the ASTER instrument. DARs shall contain the following information, at a minimum: a. Observation number b. Experimenter identification c. Experimenter address d. Investigation identification e. Scientific discipline f. Observation repetition period g. Tolerance in observation time h. User priority i. Scheduling priority and target of opportunity flag j. Descriptive text k. Location data expressed in terms of longitude and latitude as earliest start coordinates and latest stop coordinates l. Earliest start time m. Latest stop time n. Minimum coverage required o. Maximum coverage desired p. Deleted q. Deleted r. Associated product generation request and product distribution request s. Pointing angle t. Calibration requirements u. Coordination requirements v. Data transmission requirements w. Illumination requirements (day/night) x. Specific time of observation y. Sun angle z. Direct downlink option</td>
<td>PASSED</td>
<td>8/15/2000</td>
</tr>
<tr>
<td>Requirement ID</td>
<td>Description</td>
<td>Status</td>
<td>Date Tested</td>
</tr>
<tr>
<td>----------------</td>
<td>------------------------------------------------------------------------------</td>
<td>---------</td>
<td>-------------</td>
</tr>
<tr>
<td>ASTER-0120</td>
<td>ASTER GDS shall have the capability to send and ECS shall have the capability to receive DAR status, when requested by ECS. [Issue 9] DAR status shall include such information as confirmation or rejection of the DAR, and notification of DAR scheduling and completion, to include at a minimum: a. Date and time b. Instrument ID c. DAR ID d. Request status e. Implementation schedule f. If rejection, then the reason for the rejection.</td>
<td>PASSED</td>

Attachment 2

Discrepancies

The following is a list of discrepancies noted during the execution of this test.

<table>
<thead>
<tr>
<th>Discrepancy</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>EDC0000000005762</td>
<td>Over a period of 8 hours JDT crashes 4 - 5 times throughout the day. Problem appears to be a conflict between Netscape and the JDT.</td>
</tr>
<tr>
<td>EDC0000000005763</td>
<td>Executing a simple function on the tool e.g. creating a new folder, zooming the map, etc. takes two minutes or more. Connecting to GDS database is not a problem, only the basic functions on the tool is a problem.</td>
</tr>
<tr>
<td>EDC0000000005764</td>
<td>Selected AOI, then clicked on points to create a polygon. All attributes were reset but could not create a new polygon. Received an error message.</td>
</tr>
<tr>
<td>EDC0000000005765</td>
<td>Several searched failed during the test with the following errors: &quot;Search failed. Please try again later.&quot; &quot;Search error code 15023 in EcMjDarQueryxARSencesProxy:Error received from GDS.&quot;</td>
</tr>
<tr>
<td>EDC0000000005766</td>
<td>JDT needs an hourglass. While running the test the system hangs and it takes 10 – 15 minutes before it starts working again. If the system is doing something there should be an hourglass to let the client know that the system is busy.</td>
</tr>
<tr>
<td>EDC0000000005781</td>
<td>Bring up ASTER DAR tool -&gt; Click on Spatial -&gt; click on Map Overlay -&gt; Apply. Results: The map still shows options that were not selected.</td>
</tr>
</tbody>

Attention: Ms. Phyllis McNatt, Contract Specialist
Code 423

Reference: Contract No. NAS5-32605

Subject: Contract Deliverable

Dear Ms. McNatt:

Enclosed is one copy of the Report of the Interface Confidence Test (ICT) between ECS EROS Data Center and ASTER GDS (Ground Data System) in Japan (ICT12.1), (deliverable 1128).

Distribution is also being made as noted below.

Should you require any additional information, please let me know.

Sincerely,

AverStar, Inc.,
a Titan Company.

Stephen Miller
